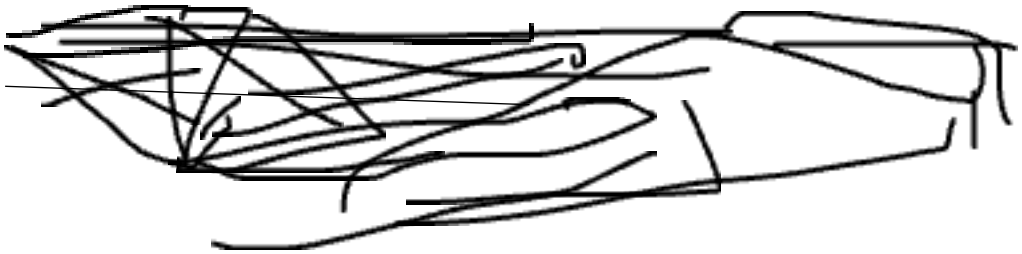
Mathematics, Physics and Biology - Similarities to Facts, Events, Singular Happenings



By Shomit Sirohi

I. Facts, Changing Facts

A unique event, which changes into a synthesis of events, which is then in fact, in one development, a process, and is about a number of processes, and in fact then events, processes and basically facts and singularities.

I mean then arrows in one major rendition.

It could be smaller arrows though. Or dots.

I. Change and True Change

I meant changing arrows.

II. Variations beyond Topoi

And so the world of topoii numbers and topoii forms, and shapes and structures.

Apart from that, many singular things like categories. A box and arrow which re-unites and becomes a fact, and an event and a happening.
